THE REDCLIFF REVIEW

THURSDAY JUNE 29th, 1939

Number 51

Message of the Dominion Pres'dt Canadian Legion

To All Commands and Branches In Canada and United States

With the departure of Their Majesties the King and Queen from Halifax on June the 15th, after their momentous and heart warming visit to their Dominion of Canada and to the United States, I now desire to express my sincere thanks and keen appreciation for the truly magnificent manner in which all Commands and Branches of The Legion, both in Canada and the United States, participated in welcoming Their Majesties. I was particularly impressed with the splendid manner in which many Legion Branches assisted in local arrangements some travelling long distances to perform this service.

It is quite evident from the reports and press notices, I have received that wherever Their Majesties stopped en route The Legion had been very active in the interests of the ex-service men, but in behalf of school children, and in some instances, the entire community. At many points they supplied Guards of Honour, performed special constable duty, and took charge of the veterans' share of arrangements wherever necessary, or where other Organizations existed, co-operated with them wholeheartedly.

I am aware that, in some places welcomes had been prepared. Their Majesties were unable to stop, or their stay was all too brief. Nevertheless, any effort expended upon these preparations has not gone unnoticed and Branches who had this experience, are to be doubly commended for their expression of loyal welcome. The work of the Legion in larger centers, where they took part in lining the streets and reinforcing the police, has already received the highest praise from the Government and Local Authorities. As your Dominion President, I do for each Branch and Command for the loyalty and co-operation expressed in such a practical form.

The Visit of Their Majesties has brought to Canada a new sense of strength and unity, and is an event in the life of our Nation which ex-service men, together with all their fellow citizens, will ever remember with gratefulness and pride.

W. W. Foster
Dominion President

GORDON MEMORIAL

Sunday June 25th, 1939

10.00 A. M. Sunday School.

7.30 Evening Service

Tenders Wanted

PAINTING.—To paint outside all windows of THE REDCLIFF SCHOOL with two coats—white. Written separate quotations, for contractor to supply paint and with paint provided, to be in by June 26th. The lowest or any tender not necessarily accepted.

Kestley Johnson,
Secretary-Treasurer, Redcliff

The King and Queen landed at Redcliff this morning, looking decidedly fit after their Canadian tour. The Little Princesses boarded the liner Empress of Britain to greet their Royal parents.

There is much rejoicing in the old land over the safe return of

Their Majesties, which sentiment is more readily appreciated by Canadians now than ever before.

We Canadians were glad to see them come; and very to see them go but we rejoice with the rest of the Empire that they are safely home again.

Local Treasury Branch Changes Location

Manager Farling Will Operate Branch Bi-Monthly

The Treasury Branch office, which has occupied the building opposite the Hicks Trading Co. since its opening here, has been moved to Alex Maske's store. The manager, Mr. Farling, will be in attendance twice a month for the convenience of the public. The Branch will be open for business on these Fridays upon which employees of the Dominion Glass Co. are paid their wages.

New Park Becoming More Interesting Daily

New Features Developing Under Expert Hands

The appearance of the New Park becomes more interesting every day as every day sees some improvements made.

Half the lawn space has been sown to grass which has made good progress during the recent rains.

Mr. A. E. Oakland who has contributed much in the setting

out of spruce trees, and flowers is now engaged in building a retaining wall on the North end of the Swimming Pool.

A ten foot brick walk has been laid on three sides of the pool the fourth side to be laid shortly.

Mr. Miller planted innumerable annuals around the Colonnade and bordering entrance walks which will be a mass of bloom as the summer progresses.

Yes, our park is really taking shape at last and we hope it will be a thing of beauty and a joy forever.

Wedding Bells

GRANT—FERNES

A quiet wedding was solemnized by Rev. J. F. Butcher at St. Barnabas Church, Thursday evening June 15th when Ruby Olive eldest daughter of Mr. and Mrs. O. Farnes became the bride of Mr. Henry Grant, second son of Mr. and Mrs. H. Grant.

Upon their return from a honeymoon trip to San Francisco Mr. and Mrs. Grant will make their home in Medicine Hat. Mrs. Grant is well and favorably known in Redcliff, having attended Public and High School here.

The Review joins with their Redcliff friends in wishing the young couple a long and happy married life.

Mr. Roy Simpson, formerly of Redcliff but now of Calgary is a visitor in town yesterday. He is a representative of the British Knit Co.

out of spruce trees, and flowers is now engaged in building a retaining wall on the North end of the Swimming Pool.

A ten foot brick walk has been laid on three sides of the pool the fourth side to be laid shortly.

Mr. Miller planted innumerable annuals around the Colonnade and bordering entrance walks which will be a mass of bloom as the summer progresses.

Redcliff Young People To Have Physical Training

To Be Undertaken Here This Coming Winter

On initiative from the Town Council a meeting was held Wednesday night in the Town Hall for the purpose of organizing a Committee to promote a recreational centre here in Redcliff under the Alberta Provincial Youth Training Scheme, this coming winter.

At the first meeting the following were present: Messrs. C. Rucholz, A. Shaw, Dr. Lewis, R. Cann and N. Luna. Present also was Mr. J. D. McQueen, who appeared before the last Council meeting. Mr. McQueen outlined the details of the scheme as laid down by the Government and gave some valuable information and advice.

The most important factor in regard to Redcliff will be to secure the proper instructors. It was decided to advertise for one male instructor, over 21 years of age, stating experience and their physical condition. The applicants will be requested to take a five weeks course in Calgary in this specific training, starting in July. Tuition fees to be paid by the applicants are only \$20.00 for the whole course, which includes board, room and books.

The applicants will also have to take care of their own transportation back and forth. Applicants, when having qualified for teaching will be remunerated for their services. Further details can be had by seeing any of the above mentioned Committee members. Applications must be handed in to the Chairman of the Youth Training Committee in Redcliff Mr. N. Luna, at the latest by noon, Monday June 26th.

The different organizations in Town are kindly requested to appoint a member to act on the Youth Training Committee and notify the Chairman to this effect.

Mr. and Mrs. C. T. Hall returned yesterday from California where they have been spending a month's vacation.

Fire At Gunderson Brick Plant Today

Large Quantity of Face Brick Destroyed

About 7 o'clock this morning fire was discovered in one of the driers at the Gunderson Brick and Coal plant here. It had reached such proportions that the Co's fire protection facilities were inadequate and it was found necessary to call upon the Town Fire Brigade for assistance.

Through some misunderstanding the Brigade went to the Pressed Brick Plant first but on finding no fire there proceeded to the Gunderson Plant.

It appears it is quite a common occurrence for a drier to become overheated but in the past the fires so started have been brought under immediate control by the workmen present. Today however the fire apparently had a good start before it was discovered and was under control of the water supply from the hydrant at hand was insufficient to stop the advancing flames hence the necessity of calling the Town Brigade.

As a result of the conflagration considerable damage has been done to the drier in question and 25,000 bricks have been destroyed.

Local Teacher Accepts Position in Calgary

Miss Kane Will Teach In One Of Calgary's Separate Schools

Miss Anna-Marie K Kane, who has taught here on the Public School staff for the past two years has accepted a position with the Calgary Separate School Board.

Miss Kane's departure will be a distinct loss to the Redcliff School, particularly on account of her musical qualifications and ability.

During the two years Miss Kane has spent in Redcliff, the pupils of her school have continued to progress in their musical education to a high standard evidenced by the splendid showing made by them at the Music and Dramatic Festival held in Medicine Hat and have received a musical training in Theory, appreciation and execution from which they will derive lasting pleasure and benefit.

WANTED

INSTRUCTORS.—One male and one female, to conduct the physical training in Redcliff under the Alberta Provincial Scheme this coming winter, age 21 or over. State previous experience and physical condition. Tuition fees \$20.00 for a five weeks course in Calgary and Transportation to be paid by applicants. Apply to Mr. N. Luna, Chairman of the Youth Training Committee, Redcliff, in the latest by Monday June 26th at noon. Remuneration for teaching after having qualified.

N. Luna, Chairman

Local Boy Wins Distinction In His Studies & Hobby

George Ballantyne, Wins Bursary in Science And Prize In Photography Contest

George Ballantyne, son of Mr. and Mrs. A. R. Ballantyne, who has been attending Mount Royal College in Calgary during the past year, has won distinction in his studies by winning a \$25.00 Bursary in Senior Science. His friends will not be surprised at his news as George has always been a good student, and particularly by interested in this branch of his school work.

During the Royal Visit to Medicine Hat, George also won further laurels by being awarded fourth prize in the Camera Contest. He was successful in securing a splendid close-up of Her Majesty the Queen, as she stood with her arms full of the lovely Gaults just presented to her and smiling her charming smile.

One of George's hobbies is photography, from which he derives a great deal of pleasure in his spare time, and is this case profit and distinction.

The Review joins with his fellow citizens in congratulations to another son, on his achievement both scholastically and photographically.

Pigeon Racing Here Promises Good Sport

Some Locally Raised Birds Already Doing Well

It seems that pigeon racing, which is rapidly making a comeback in the sporting world, will soon become active in Redcliff.

Mr. Jack Hope, who has had a good deal of experience with homing pigeons, has obtained several birds of good strain and has raised several pairs in town, some of which have already made fairly good time on short flights. Mr. Hope has built a bird trap in his back yard which proves he is quite capable and efficient in the handling of these birds.

Mr. Hope hopes to interest enough people in pigeon racing to create some competition in this sport and we hope that for the sake of good sport and Mr. Hope, Mr. Hope's hope may be realized.

Departmental Examinations started throughout the province today. The first paper was Literature 4. Only Grades Nine and Twelve write Departmental exams this year.

Mr. Floyd Burke, his brother Paul and his Grandfather, one-time residents of the Redcliff district arrived in town Monday night to visit their brother and grandson Mr. Don Burke and family. They came by motor starting from Oakland, Calif. on Saturday. When it comes to "Moving" we'd better hand it to the Burkes and say nothing more about it. We understand that Granddad Burke is just 79 years young and stood the trip just as well as the other young fellows.

Open Sesame To Sales

Despite the many illustrations of its efficacy that could be quoted with little effort, the value and power of advertising is not yet fully appreciated, even by many of those who stand to gain the most by it.

It has been said that if you have something the world wants, the world will beat a pathway to your door, or words to that effect; but the cordiality to this—a most important one and one that is sometimes overlooked or minimized, is the necessity of letting the world know that you have something it wants, before it is possible to have the well-trodden path to the proverbial doorway.

In other words, advertising is the open sesame to sales of goods and services. The world may thirst and hunger for something you have to offer, but the world will continue to lack that something if you neglect to let the world know that you have it.

Apart altogether from the immediate value of advertising, the cumulative results that it brings is also often overlooked or minimized. Advertising brings demand. Demand spells sales. Sales create further demand and volume of production, and volume means reduction in cost, lower selling prices and improved products. Lowered prices and better goods widen the range of demand and this, in turn, stimulates additional sales.

A Remarkable Example

A shining example of the value of advertising as a stimulant to business is afforded by the automobile industry.

Less than 25 years ago Walter Chrysler paid \$5,000 for his first automobile, a crude vehicle that sometimes ran and sometimes did not; a machine which had to be started by a hand crank, whose oils lamps had to be lighted with matches and whose brakes had to be operated by hand.

But consider the automobile of to-day and its cost. For one-fifth of the sum paid by Mr. Chrysler for his first machine, or even less, the present day purchaser can obtain an infinitely more powerful machine that can be depended upon to do its work efficiently under almost any conditions and a machine comprising so many refinements and improvements when compared with the pioneer models, that it would take a column or more just to list them.

And this result, an infinitely superior vehicle at a fraction of the selling price in the earlier days of the industry, is largely the result of advertising. What happened in the automobile industry was something like this, to quote Wright A. Patterson, an authority on the subject: "Advertising created increased demand. Demand was responsible for increased employment. Increased employment brought augmented purchasing power and this in turn stimulated further demand," aided and abetted by continued and additional advertising.

Thus on a foundation of advertising was built up one of the greatest industries on the continent, which, in its turn as it grew, fostered and developed many other subsidiary industries, creating more pay rolls and more potential and actual consumers of motor cars.

The same process and the same results are equally applicable to many other manufacturing industries, such as radio, refrigeration and a host of other smaller and less expensive commodities which are to be found in almost every household today. The same process is in action but they would not be in extensive use to-day and advertising had built up flourishing industries had it not been for advertising, for without advertising no one would have known about them.

Discredited Theory

Nor are the benefits of advertising confined to manufacturers and consumers of manufactured products. They are of equal advantage to the distributing services of the country. The grocer, the butcher, the baker and the candlestick maker are also beneficiaries of advertising, as well as their customers, if they only realize it.

The country merchant who makes use of his available local advertising facilities and as a result creates volume of sales for his goods or his services is enabled to reduce his overhead costs and thereby able to cheapen the product or the service he offers, giving him a distinct advantage over his non-advertising competitor. As a result not only does the advertising merchant benefit but his customers are likewise beneficiaries since they are able to buy a commodity or a service at less cost, or a better article or a better service at the same price. Either way, both benefit.

When this self-evident truth becomes better understood and more readily appreciated the false doctrine that is sometimes circulated in the towns and on the farms that advertising is an "economic waste," paid for by the consumers, will be discredited, as it deserves to be.

Small But Powerful

Indians Had Remedies

Acquired Comprehensive Knowledge Of Medicinal Properties Of Herbs
Dr. J. H. Haggerty, director of Public Health Services of Canada, in the first of his series of addresses on "The Romance of Medicine in Canada" has given interesting data on Indian life. In this address, given in full in the Spring issue of "Health," the Ottawa authority says:

"The Indians were possessed of a comprehensive knowledge of the medicinal properties of the vegetable kingdom. They had remedies for each and every occasion. Their medicine man was only a concession to superstition and not the creator of their medical knowledge. Their system of medicine was an unwritten one that was handed down from generation to generation and, in spite of the manifold defects of such a system, was surprisingly complete."

An astronomer says the earth is speeding 180 miles a second on a journey it will need 207,000,000 years to complete. It will have to go much better than that if it wants to leave its troubles behind.

Glazes that may be bent, rolled and twisted on the market. True, at long last, the principle of the toothpaste tube may be applied to the catfish bottle.

Heraldic Symbols

Columbia University in New York Still Retains Crown
When King George and Queen Elizabeth visited Columbia University on Monticello Heights, New York, they set foot inside a college which despite 484 years of allegiance to the stars and stripes has retained a crown as one of its heraldic symbols.

Along the flagpole at the university, which in the days when New York was a province of Great Britain, was called King's College, is set a substantial-looking gold-painted crown, and a crown is traced in white against the blue background of Columbia's flag.

It is a replica of the iron crown which was set on top of the weather-vane of the first King's College building at Park Place where New York's veteran skyscraper, the Woolworth Building, now casts its shadow.

The crown, one of Columbia's treasures, was shown to the King and Queen by President Nicholas Butler during their 15-minute visit to the university June 10. With this relic they saw the lengthy 18th-century building, which on Oct. 21, 1774, granted King's College a charter creating "a body politic and corporate, in deed fact and name," and appointing the King "for the instruction and Education of Youth in the Learned Languages."

Columbia University uses the crown design as a watermark for its green stationery and royal blue figures likewise in the telephone printed on the title pages of books published by the Columbia University Press.

Not His First Visit

King George When Duke Of York Was In Niagara Falls

Contrary to general belief, it was not the first time that King George VI. set foot on American soil when he made his visit to the United States.

As proof that the King, then a youth of seventeen, spent several hours across the border back in 1893, the Rev. J. W. Whitlam, minister of Knox Presbyterian church, Brantford, Ont., produced a photograph he says was just after Prince Albert Duke of York, as he was known then, and a party of British naval officers had disembarked at Lewiston.

"It is without doubt the first of the present reign," said Mr. Whitlam, "and I have every reason to believe that it is the only one in existence to-day showing His Majesty in the land of the Stars and Stripes."

The King was then known as Prince Albert, his age was seventeen, and he was a naval cadet attached to H.M.S. Cumberland, which had just returned to Halifax.

A Success Story

Man From Poland Makes Good On Rocky Ontario Farm Land

A success story with its locale the rocky farm land of Northern Ontario, was told by a Polish immigrant in naturalization court at Kingston by Frederick Maly, who came to Canada from Poland eight years ago with 10 cents.

Applying for citizenship papers with Emil Maly, who came here from Poland about the same time and farmed near him in Osnab township, Maly told the court that through hard work his 10 cents had pyramided until now he had a 500-acre farm stocked with fine animals and \$2,000 in cash.

Maly told how he bought a farm for \$2,000 and had paid off all but \$500 of the mortgage. They praised Canadian methods of farming.

"All we had to do is work," said Maly. "Canada is a wonderful country. Farmers here can make money."

Used Special Coal

The coal used in the recent locomotive which pulled the royal train of King George and Queen Elizabeth through the United States was of a carefully selected grade to assure "absolute efficiency" in operation, railroad officials said. The locomotive, 102 feet long, had a special tank carrying 23 tons of coal.

Lacked Foresight

Bruckville Recorder and Times says residents of a Western Ontario district are said to have experienced "chugging at the heart-strings" when their branch railway lines were closed, and that might have been prevented if the people in question had had more foresight to give the line decent patronage.

Strange Auction Sale

A single tallow candle illuminated England's strangest auction sale at Chard in "Old Pops" "secret chamber." The sale, held annually for disposition of a valuable water-cress field, dates back 200 years.

Prairie Pasture Management

Cultivated Grasses Superior To Native Species For Maintaining Livestock

A certain amount of pasture is always needed on farms carrying live stock. The acreage required will depend on the number of stock, kind of pasture and climatic conditions. States F. M. MacLennan, Dominion Experimental Station, Scott, Sask. Where native grasses grow supplies the pasture, it has, in many cases, been over-grazed during the past dry season. In many of these pastures, prairie sage (Artemisia frigida) has increased, thus reducing them to a low carrying capacity. Pasture investigations at the Scott Experimental Station have proved that cultivated grasses have a much higher carrying capacity than native species.

In 1934 and 1935, sixteen to eighteen milch cows were pastured on 100 acres of native grass. Each year the cattle were put on about the middle of May and taken off the third week in October. It was estimated that the above number of cattle was about the limit of the carrying capacity of this pasture. It averaged 16.8 cow days per acre per year for the two years.

Two years, 1937 and 1938, approximately the same number of milch cows with the addition of a few young cattle from time to time were pastured on 48 acres of cultivated grasses. This pasture consisted of three fields, namely, 22 acres of a mixture of western rye, crested wheat and alfalfa, 12 acres of bromegrass and 12 acres of crested wheat grass. Over the period of two seasons, it averaged 59 cow days per acre per year.

A comparison of the figures shows that the cultivated grasses had practically three times the carrying capacity of the native grasses. There was little climatic difference for the seasons compared. It is advisable on the prairies to provide supplementary pasture in the hot part of the summer where irrigated or low meadows are not available. While sweet clover may be used to help this situation, a more dependable method is to sow supplementary acres of oats in the spring for pasture during the hot period.

Women should stand up for their rights! At one time egg money was small change to most women, but now the maternal exchequer, but now that it amounts to something it is going, more and more, to buying cheese tobacco and pay taxes, says the Farmer's Advocate.

Showed Decided Difference

New Town In Cheers When Children Saw Their Majesties

Perhaps nobody noticed it except the four or five adults in the Richardson Stadium who had long training in observing every last small detail of a very large event, but the pitch of the mighty cheering of ten thousand, five hundred young throats dropped a full octave or more immediately after school children saw their first sight of Their Majesties. Not only did the cheering drop in pitch, although its strength did not diminish, but it changed entirely in character.

There is no indicator of emotion more sensitive than the voice, and the only explanation of the change must be that the actual appearance of the King and Queen produced a very deep emotional effect on the great majority of the children present. It has been taken for granted that it is important for school children to have every opportunity of seeing their King and Queen. The effect upon the children who were in the stadium seems to prove the point.

Sporadic cheering started a short while after the children took their places. It was practically continuous from the moment they were told over the public address system that Their Majesties had arrived in Kingston and would appear before them in a few minutes. But it was typical, shrill, high-pitched children's cheering. It reached a tremendous crescendo as the first motor cycles of the police escort swept through the stadium gateway, but it was still the high-pitched, rather unpleasant variety.

Then the Royal car appeared and the Royal standard was broken out. There was a momentary hush, then the cheering resumed and gradually grew to tremendous volume in its new pitch and quality. "It was music now, like a great tenor organ pipe whose mighty tones rose and fell as the smooth rollers of a quiet sea. Something had occurred which the children will remember to the end of their days.—Kingston Whig-Standard."

"None" of the long day at the mouth pole is Dec. 32, on which day the area at the pole gets the largest amount of exposure to the sun's rays than any part of the earth's surface receives.

Caught recently by a Norwegian crew, wholly bare in its body a barpoon of the type used 40 years ago.

Some Cooking Hints

Things One Should Know To Get The Best Results

When a cake is done it is a delicate brown, has shrunk slightly from the edge of the pan and when pressed lightly with the finger tips, springs back and leaves no mark on its surface.

For best results the ingredients for a cake—flour, eggs, and milk—should be at room temperature. Besides, the shortening and sugar mixture is much easier to cream thoroughly and the result is a tender, moist cake.

Properly beaten egg whites for cakes just hold their shape. They are glossy and have a moist rather than a dull and dry appearance.

Built In Record Time

Construction Of 11,000-Ton Ship Was Speeded Up In Glasgow

In the record time of 26 weeks an 11,000-ton ship, measuring 530 feet long, has been built at Clydebank. She is the New Zealand Line motor passenger liner Essex. Construction was speeded up to make way for naval expansion.

Special apparatus will suck in 13,000 cubic feet of sea air every minute and distribute it among fruit for cooling and preservation. Apples breathe, and the gases they exhale will be trapped, cooled and wafted through the holds to prevent fruit rotting.

Anthrax is not considered an important public health problem in the U.S. since less than 200 cases occur annually.

2000-2001-2002-2003-2004-2005-2006-2007-2008-2009-2010-2011-2012-2013-2014-2015-2016-2017-2018-2019-2020-2021-2022-2023-2024-2025-2026-2027-2028-2029-2030-2031-2032-2033-2034-2035-2036-2037-2038-2039-2040-2041-2042-2043-2044-2045-2046-2047-2048-2049-2050-2051-2052-2053-2054-2055-2056-2057-2058-2059-2060-2061-2062-2063-2064-2065-2066-2067-2068-2069-2070-2071-2072-2073-2074-2075-2076-2077-2078-2079-2080-2081-2082-2083-2084-2085-2086-2087-2088-2089-2090-2091-2092-2093-2094-2095-2096-2097-2098-2099-2100-2101-2102-2103-2104-2105-2106-2107-2108-2109-2110-2111-2112-2113-2114-2115-2116-2117-2118-2119-2120-2121-2122-2123-2124-2125-2126

Praises P. F. R. A.

Lord Tweedmouth Talks To British Farmers Visiting Canada

When a party of British farmers visited the Central Experimental Farm on May 22nd, His Excellency Lord Tweedmouth, Governor-General of Canada, took occasion at a luncheon given at the farm to speak highly of the work that is being done to Western Canada in connection with Prairie Farm Rehabilitation.

The visitors made a few days tour of part of Eastern Canada before going to New York City to see the World's Fair. They sailed on the return voyage from Montreal on May 25th aboard the R.S. Albatross, the same boat on which they made the westward passage.

You should go to Western Canada, said His Excellency, "not only to see where the finest wheat in the world is grown, but to see the wonderful work that is being done to prevent soil drifting, soil erosion, to get the land back to pasture, to water development and water conservation. There is no other piece of practical scientific work being done anywhere."

His Excellency said that while Canada has great assets to offer in its fisheries, in its forests and in its water powers, the land is and will remain the country's greatest asset. Our civilization was founded on agriculture and still exists, by virtue of agriculture. In the British Isles the farmers are the mainstay of the nation, and there the land is the chief asset, even though the country is predominantly industrial. In Canada, as in Scotland, his ambition had been to be a sheep farmer and had he followed that ambition it is probable he would have done less mischief than he has done.

His Excellency, Lady Tweedmouth also attended the luncheon, and members of the party are neighbors of their Excellencies, whose home in England is at St. Albans, near to the City of Oxford.

The visitors were welcomed to the farm by Dr. E. K. H. Barton, Director, Dominion Experimental Farms, and he and the Chiefs of the different divisions spent two hours in showing the party round the farm. Dr. G. S. H. Barton, Deputy Minister, Dominion Department of Agriculture, presided at the luncheon and introduced the Governor-General. Dr. Barton referred to the fact that Canada owes a great deal to the British farmer, who is recognized as income producing good. He said that His Excellency had a keen interest in agriculture in Canada, which is a helpful and encouraging factor.

Clearing The Atmosphere

Cardiff Leads The Way In Fight Against Smog

Cardiff leads the way in the fight against "smog"—a combination of smoke and fog. The city has completely blacked out busy industrial centers in the United Kingdom. Research into atmospheric pollution shows the Welsh seaport over the past winter had the lowest concentration of sooty matter of some 10 cities and towns in which measurements were taken.

At the other end of the scale is Greenwich. Figures compiled by the Department of Scientific and Industrial Research give it a rating of 65 per cent—meaning that during the winter it had heavy smog haze almost two days out of every three.

Complete lack of wind would mean doom to big cities like London, according to the department's 24th annual report. If no wind existed to clear away smoke from London, "life might become practically impossible, because not only would the smoke accumulate, but also other products of combustion, such as carbon dioxide and sulphur dioxide."

London's rating in the "smog" chart was 54 per cent, only slightly less than that of Greenwich. Glasgow, second biggest city in the United Kingdom, had a rating of only 19 per cent.

Despite its grimy statistics, the report sounded an optimistic note. General findings indicated British cities showed a tendency to become cleaner during 1938.

Model For Holy Statue

Alfred P. Bradman, sculptor of the Holy Memorial Statue in Whitehall, has been awarded a medal by the Royal Society of British Sculptors for "the best work of the year by a British sculptor published or exhibited in London." The design of the statue aroused great controversy. Hurdlovers and artists formed opposing camps. Lady Hail, widow of the Great War field marshal refused to attend the unveiling ceremony in 1937.

The Norwegian navy has placed orders with British shipyards for construction of eight speedy 60-foot torpedo boats.

Location Is Not Good

Canada's Building At New York Fair Hard To Find

The slogan "Canada First" is a good one in many respects, but it was not adopted, unfortunately, in connection with this Dominion's official participation in the New York World's Fair. The Canadian pavilion there was opened in due course, somewhat late it is true, but there was no special complaint on that score, as tardiness seems to have been a general failure with the notable exception of Great Britain.

The principal complaint is not in the showman so much as in the place of opening. Generally it is conceded that Canada's building has been put in such an out-of-the-way spot that it is rather hard to find. This is explained, in part, by the fact that construction of the edifice was not started until December 6 last when, presumably, there was not much head left for allocation.

This is most unfortunate, whatever the reason. Canada, as the "good neighbor" of the United States might have been expected to have one of the most imposing buildings at the fair, and certainly one of the most prominently situated. Failing that, it would have been better—perhaps it would have been the best advantage from the start—to have had Canada's official exhibit in a wing of the British Building following the examples of Australia and New Zealand—Brentford Exporter.

Countrywomen Of The World

Triennial Conference Held In London With 30 Nations Present

Mrs. Alfred Watts, who started the Women's Institute movement in Canada's far west, opened in London the triennial conference of the Associated Countrywomen of the World with the assertion that all were united in the common purpose to help one another.

Addressing delegates from 20 nations, Mrs. Watts, the organization's president, referred to the fact that they represented different races, creeds and nation loyalties, but were united in the desire for mutual help. Prime Minister Chamberlain sent a message of welcome to the delegates. Members of the delegation from Canada are Mrs. MacGregor of Penitence, N.C., president of the Women's Institute of Canada; Mrs. E. L. Winsor, Mrs. Meade Robins, Mrs. A. Walker, of the Ontario Institute; Mrs. J. Bain Ashworth of Quebec and Mrs. Marie Webb of Saskatchewan.

Idea For Restaurants

Warm foods stimulate your appetite, for food, cool colors curb that appetite. The time will come, according to the Kitchens Magazine, when all restaurants and dining rooms are painted gray-green at one end, and apricot-pink at the other, the first for the benefit of overweight patrons, and the second to create an interest in food for the benefit of underweight customers.

FRENCH MILITARY LEADERS VISIT ENGLAND

General Weygand of the French Army and one hundred officers visited England recently, and the General is seen above with General Birdwood, left, and Viscount Gort, right, head of the British Imperial Staff, as they visited the British military college at Sandhurst.

Symbol Of Authority

Cow Bell Is Used At Agricultural Conferences

In place of the gavel, the historic implement with which chairmen of meetings are wont to maintain the even flow of procedure, a cow bell is the symbol of authority at the international conferences of agricultural economists. At the recent conference held at Macdonald College, St. Anne de Bellevue, P.Q., the meetings assumed a typical agricultural atmosphere on the tink-a-tink of the cow bell. This bell was picked up on Salisbury Plain, England, and is reminiscent of the fact that the first meetings of international economists was held in that country, but to thousands of Canadians who were members of the First Contingent of the Canadian Expeditionary Force the name of Salisbury Plain will evoke mixed memories of strenuous training in mud and rain. It all this is simply a visible evidence of the great forward strides that are being made in the more progressive countries of South America, destined to be great empires within this century.—Regina Leader-Post.

The Queen's Seal

Queens are always free to select their own colors for their seals. Her Majesty Queen Elizabeth has just chosen here it is one of her favorite shades, a soft, deep powder blue. Sealing wax is no longer used for these seals. They are embossed on the paper and the arms are printed on to them. Queen Mary's choice was a rather dark blue.

Has Become Large City

Buenos Aires Is Now Second Largest In Western Hemisphere

People have become accustomed to think of New York as the first American city and Chicago the second, at least in size. But now we shall have to be specific, and say "North American city" or "city of the United States". For Buenos Aires, the beautiful capital city of Argentina, is now the second city of the western hemisphere. Its population, which has had a phenomenal growth in recent years, is now 3,234,444. The two cities are almost the same size geographically. Since Buenos Aires increased the federal district. During the past eight years, Buenos Aires has grown in population by 400,000 while the whole state of Illinois was increased only 200,000.

All this is simply a visible evidence of the great forward strides that are being made in the more progressive countries of South America, destined to be great empires within this century.—Regina Leader-Post.

Investigating a pheasant's stomach to find what it had been eating, an Ohio hunter discovered it had dined on 26 grasshoppers, nine grains of corn and a couple of spoons of weed and grass seed.

The man who is at the top of the ladder, says a business man, who incurs the hatred of those who are below. Especially if he is inclined to be a bit slap-dash in his painting.

The Weeping Willow

Interesting History Of Origin Of Tree That Was Brought From The East

The weeping willow is an exotic in Canada, coming to the North American continent from the East through the agency of the English poet, Alexander Pope, states George A. Stevenson, gardener at the Dominion Experimental Station at Rotham, Essex. The story goes that Pope was present when the cover was being taken off a box of fruit shipped to England from Smyrna and observed that one of the sticks appeared as if it contained some life. He planted it in the hope that it would grow into something not known in England, and from this grew the willow tree that has given birth to so many others. During the American Revolution, a young British officer brought a slip of Pope's tree with him across the Atlantic, and from it, it is said, have come all the Weeping Willows in North America. Linnaeus, the great botanist, named the tree, Salix Babylonica, or willow of Babylon, in allusion to the passage in the 137th Psalm, where the captive children of Israel are represented as hanging their heads upon the willows by the rivers of Babylon.

Using Altrichs

Icebreakers now fish with altrichs. A Commerce Department report from their country says commercial fishermen have adopted the plant for speeking salmon. At an altitude of 4,500 feet, herring have been seen nine to 12 miles away.

Weather Signs

Fifty Per Cent. Average Appears To Be Good Omen

Individuals who profess their faith in old-time weather proverbs are as likely as not to be caught in a storm without a raincoat or find themselves wearing rubbers in the sunshine. Such is the information gleaned from a meeting of the American Meteorological Society in Atlanta, Ga. Rainbows and mackerel skies have no real bearing on the weather, said professional weather prophets attending the gathering. Cuts tomorrow, they declared, is as reliable a way of telling you of bad weather as putting one's trust in such familiar sayings as: "Red skies at night, sailors' delight; red skies in the morning, sailors take warning."

"It's a pretty good proverb that gets as much as 60 per cent. results," G. W. Minding, U.S. meteorologist and host at the meeting, asserted. "And anything less means about a 50-50 chance of being right or wrong—which is not much help."

Even the old belief that a ring around the moon presages rain for the next day fails to make much sense. Ice crystals in a thin sheet of high clouds are responsible for the ring and they do form before and not after storms, Mr. Minding admitted. But he also pointed out that the unsettled conditions thus forecast may not reach the observer in the time of the country for several days or may skip it entirely.

Not many pinions, perhaps, are actually postponed on the sole authority of some old-fashioned weather prognosticator. Official forecasts are committed to-day almost to the exclusion of the amateur variety. Yet when a person probably has some "sure" sign that seems to prove itself, with reasonable frequency, a portent of meteorological bad luck. The homemaker who washes and polishes his car till it is fairly blinding in its brightness and parks it by the curb, only to find it covered by may observe—he may safely depend, however, on light showers bearing spots of dirt.—Minneapolis Tribune.

Just Like A Home

Automobiles Of Future Will Resemble Vehicles So Much

Automobiles of the future, as visualized by a motor expert, will appear more like homes than vehicles—with movable chairs, sunbath roofs, air-conditioning, beds and washstands.

Edwin Allen, of the Standard Products Company, told the World Automotive Engineering Congress at New York.

In the not-too-far distant future, we will walk up to our cars, push a button and the door will open. . . the passenger will get in, light the car, and the door will be wide and stiff. "A portion of the roof will be made of a curved translucent material which will let in the sun's rays, giving rays of the sun, at the same time removing the glare. A series of buttons will regulate the temperature and humidity to any desired condition of air."

Breasts of another button will unfold a concealed bed from out of the partition between the passenger and the engine compartments. Many little passenger conveniences will be installed, such as toilet and lavatory facilities."

Perfect Teeth

Dr. Dufour Says Dionne Quintuplets Have The Most Perfect Ever Seen

The Dionne quintuplets have the most perfect example of teeth that dentists ever have seen, due to proper diet and good inherent qualities. Dr. Allan R. Dufour told the 72nd annual convention of the Ontario Dental Association at Toronto.

"The quintuplets' teeth are examined by x-rays every year. They are in perfect cavity. X-rays show that their teeth are all in proper position."

The quintuplets might have died last winter if it had not been decided to "take a chance" and remove their infected tonsils and adenoids. Dr. Dufour said the 200 dentists and dental nurses attending the convention. The tonsils of the little girls had become badly infected, he stated.

Progress Is Slow

Women are making headway in the profession of banking, stated Pathfinder, but they still have to work twice as hard as men to gain promotion. A conference of the Association of Bank Women at Rochester, N.Y., learned recently. Despite obstacles, it was pointed out, the organization's membership has climbed from only five in 1921 to 185 today.

Manila fiber was extensively used in early paper making. It is learned by a study of a manuscript manuscript dating from the 11th to the 18th century. 2011

BRITISH SUBMARINE SINKS WITH HEAVY LOSS OF LIFE

The new British submarine "Thetis" was undergoing acceptance tests near the mouth of the River Mersey when she went down in a three-hour dive and failed to return to the surface. Rescue ships located the vessel after several hours' search and four members of the crew escaped by means of the Davis "Lung." It was reported 99 others lost their lives. The main picture shows one of the sister ships of the Thetis, which went down in a similar manner. At the top is a picture of the escape equipment on the Thetis. Each man wears the equipment shown above and leaves the submarine in an "air bubble" from the little chamber into which the demonstrator above is stepping. At the top right are some of the naval divers who went down to investigate the damage.

WORLD HAPPENINGS BRIEFLY TOLD

FRANK KRAIN, 30-year-old civil servant, was beheaded in Berlin following his conviction of espionage.

Sir Hubert Wilkins, Australian Arctic explorer, landed at Oslo aboard the Polar ship Wuyat Rapp to prepare for a visit to the North Pole region.

Two railway cars carrying a corps of rangers to a forest fire jumped the track at Hockl, Japan, and plunged into a 300-foot chasm, killing 23 and injuring 33.

Anti-Fascist Moroccans paraded the streets in Casablanca, Algeria, with pieces of macaroni attached to their clothing calling Italy "Italy's Public Enemy No. 1."

Perdual Price, carlineson fax, the Peace Treaty carlineson fax, since 1927, announced he had accepted an offer to be university carlineson and professor of composition at Michigan University at Ann Arbor, Mich.

A Vatican news service says the Vatican has established a detective squad to stop smuggling from Vatican City to Rome. Coffee which was almost unobtainable in Italy is plentiful and cheap in the Papal city.

The ashes of Sir Philip Mason were scattered over the picturesque grounds of his country estate at Trent Park by planes of his former squadron. Sir Philip was one of the wealthiest men of Great Britain.

The Soviet government has announced that its 1939 census showed Russia had a population of 150,467,184. The total reported in Italy is 28,000,000.

Prize Minister Chamberlain and Polish Ambassador Edward Raczyński conferred and reports they discussed a possible British loan of £20,000,000 or £25,000,000 (\$34,000,000 or \$41,000,000) to bolster Poland's defenses.

Splitting The Atom

Lord Nuffield Has Equipped Laboratory For Research Work

Lord Nuffield has marshaled science in an attempt to split the atom in his latest effort at fight disease.

The millionaire car manufacturer who has scattered fortunes over the Empire on hospital charities, has built and equipped a \$200,000 laboratory and hopes the split atom will release energy producing radio-active materials, which, the radium, will help in the treatment of disease.

The work will be carried out by Professor M. L. Oliphant, 38, director of physical research at Birmingham University and assistant to the late Lord Rutherford, conducted his pioneer experiments at atom splitting.

Professor Oliphant will use a 280-ton apparatus now being constructed at Glasgow. It comprises a 13-foot hollow cube of steel with wall two feet thick. Around the outside will be wound miles of copper wire.

Five million volts of electricity will be shot through the wire and foot-long sparks will leap between two poles inside the cube bombarding a container holding the element whose atom is to be split.

It is hoped the powerful flow of electricity will release energy, making the element artificially radio-active.

Small Man In History

Most of Military Geniuses Have Been Under Average Height

General Franco, Spain's new dictator, takes his place among the short men who have made history, says the Hamilton Spectator. Less than five feet four, he is two inches shorter than Napoleon was, and his contemporary, Adolf Hitler, is also under average height. All of which has been subjected to a growing interest in the fact that the great military geniuses of history have been small in stature.

Julius Caesar, Genghis Khan, Alexander the Great, Napoleon and Ulysses Grant, of American Civil War fame—all were of this type. It is therefore, pondered as to whether ambition for aggressive action is not linked with a distinct inferiority in size, a field that plainly belongs to the psychologist.

It is a phenomenon that should be kept there, or the international scene will get even more complicated than it is now.

Received Ship Money

The Duke of Kent flew back to London recently after a whirlwind tour of his namesake county. At Sandwich, one of the Cinque ports on Britain's southeast coast, an ancient ceremony was revived when the duke was given a gold half-sovereign as ship money.

Means that are fed lobster shell will produce eggs with red-orange yolks.

Oranges For Germany

General Franco Paying Part Of War Debt In Fruit

Oranges in seemingly plentiful quantities brightened Berlin tables after many months of inability to get more than one or two, if any, because of the Nazi Government's food conservation policy.

The appearance of the big boxes of the Spanish fruit in stores caused a burden for housewives and prompted many questions as to why oranges suddenly became plentiful. The customary answer given in streets was that Spanish Nationalist Leader General Franco was paying off part of his "war debt" to Germany in that way.

Otherwise, German supplies of food and raw materials are practically on a wartime footing. Food hoarding has been undertaken on a gigantic scale by the German State. Canneries are putting up meats, vegetables and fruits as reserves against the possibility of war.

Benazine, soap, and textiles and dozens of other commodities essential for the conduct of war are also being stored.

About the first question any foreign visitor in Germany hears from a visitor: "Is there really a food shortage here?"

In the standard hotels, or, if he lives with friends, they have done a bit of hoarding to provide the best possible entertainment for the guest.

This is part of an effort to make foreign travelers feel that food is plentiful in Germany, not usually do they feel that food is expensive, for they pay only half of what the native or the foreigner would pay. A North American resident in Germany gets about 2.48-reichmarks for a dollar. A visitor entitled to travel money gets about 3.40 marks for a dollar, and naturally finds many things in expensive.

SELECTED RECIPES

FRUIT NUT ROLL

- 1/4 cup whipping cream
- 4 tablespoons apple butter or fruit pulp (apple or cherry)
- 24 Christie's Vanilla Wafers
- 1/4 cup chopped nuts
- 1/4 cup shredded coconut

Whip cream until stiff and fold in apple butter or fruit pulp. Spread a generous amount of this mixture over the bottom wafer and stack one on top of another. Lay the roll of cream on a plate and spread the remaining cream mixture. Sprinkle with chopped nuts or shredded coconut. Bake at 350 degrees for three hours. Slice diagonally when serving.

GRIFFIDE CAKES

- 1/4 cups sifted Swiss Down Cake Flour
- 1/4 teaspoon Cinnamon Half Powder
- 1/4 teaspoon salt
- 2 egg yolks, slightly beaten
- 2 cups sugar
- 2 cups sugar melted butter or other shortening
- 2 cups whole wheat flour

Sift four cups, measure, and bake in a 13-inch cake pan. Combine egg yolks and milk; add gradually to the flour mixture. Fold in egg whites. Bake on hot, greased pan. Sprinkle with icing. Cakes keep well.

Note: One teaspoon sugar may be added to each of a mixer griddle cake is desired.

A Dangerous Toy

Parents Asked Not To Give Children An Air Gun

An appeal to parents not to give their children air-guns as gifts was made by the Chief Constable of Carlisle when three boys appeared to answer summons for carrying and firing air-guns in the street.

"There is a growing tendency on the part of many parents," he said, "to present these air-guns to their children as a gift, and that they are equipping them with a powerful and dangerous weapon. Coupled with the fact that the children are tempted to shoot and his inaccuracy, make the gift a potential danger."

Legislation recently attempted to curtail their use by prohibiting boys and youths from buying them, but at the same time made it permissible for a parent to give one to a child.

In their mistaken kindness parents took upon an air-gun as merely a toy, but he appealed to them to help to stop a nuisance which often had such terrible and painful results.

What's In A Name

The Wall Street Journal gives a list of towns with odd names, which of the state included, make interesting reading. Ash, Kan.; Angel, Tex.; Ogop, Fla.; Odear, Me.; Skelton, Ky.; Shoo, Fla.; Kay, O.; Houdy, Miss.; Fives, Tenn.

There are 64 streets and squares in London named Alfred in honor of Queen Victoria's husband.

Air Attack Protection

Revising Expert Opinion On How To Protect Britain From The Air

Fear of attack from the air, developed without training, is rapidly revised the expert's ideas of how to protect Great Britain from attack.

Advocates of a strong counter-offensive against the war production plants and other military objectives belonging to an enemy thus are gaining in numbers.

Many believe that in a general European war a major objective of any power attacking Britain would be to cripple the country by intensive bombing raids.

Since Britain was attacked in the Great War, developments of aviation have changed both theory and practice of aerial warfare.

Then, because of limited flying range, most German bombers were forced to enter Britain over the southeast coasts of Essex and Kent where there were only 50 miles from German air bases.

By concentrating anti-aircraft guns around London and Essex and Kent, it was possible to protect the whole western and northern areas of the island.

Now a minimum 1,000-mile flying range is commanded by bombers. Many Britons insist the only way to stop raids would be counter-raids on continental plants which turn out replacements for destroyed machines. It would be futile merely to shoot down the raiders, they argue.

Fifty Years Of Progress

Flower Advertising Agency Has Built Up A Big Volume Of Business

From Canada's first small unknown advertising agency to an organization that to-day places millions of dollars of business a year, is explained by Charles T. Pearce, president of a J. McKim Limited, in that agency's Golden Jubilee issue of the McKim's Directory of Canadian Publications, now just off the press.

Recalling brand names that flourished in the genesis of modern Canadian merchandising and which were advertised through this agency, the board in the directory lists more than 100 names in ten million orders have been issued since the agency was founded in 1894.

Through its offices in Montreal, Toronto, Winnipeg, Vancouver, Halifax, and London, England, its affiliates in Australia, South Africa, New Zealand, India, Egypt, China and France, A. McKim Limited handles and sells one of the largest advertising agencies in the world.

Its extensive annual directory of Canadian publications contains exhaustive data on newspapers, magazines, and other periodicals, as well as on markets, geography and other statistical matter. This latest edition is the thirty-second.

A New Danger

Animal parasites found seen in the north are expected to be encountered more frequently in the future, owing to the rapid air transportation from the South. The Rocky Mountain Medical Journal points out that any person coming from a country in which animal parasites are prevalent is potentially a carrier of the disease.

The United States Public Health Service requires inspection of all persons arriving from countries where such parasites are common, as well as lines arriving from foreign countries.

Wings of some insects beat as fast as 300 strokes a second.

YOUNG NEW PRINCESS PROCK!

By Anne Adams

Curves are "in" again, and they will be "in" for a long time. A special note of this year's new Princess 442, girls, if you're planning to make some new Princess dresses, it will give you a smaller waistline. Indeed, there's "wired" charm in every line of this youthful princess frock.

The Princess 442 is available in junior and misses sizes 10, 12, 14, 16 and 18. It takes 3 1/2 yards 3 1/2 inch fabric and 3 1/2 yards lace edge.

Send twenty cents (20c) in coin (stamps cannot be accepted) for this Anne Adams pattern. Write plainly: Size, Name, Address and Style Number, and send order to the Anne Adams Pattern Dept., Winnipeg, N.W. 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88, 90, 92, 94, 96, 98, 100.

Princess 442 is available in junior and misses sizes 10, 12, 14, 16 and 18. It takes 3 1/2 yards 3 1/2 inch fabric and 3 1/2 yards lace edge.

Send twenty cents (20c) in coin (stamps cannot be accepted) for this Anne Adams pattern. Write plainly: Size, Name, Address and Style Number, and send order to the Anne Adams Pattern Dept., Winnipeg, N.W. 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88, 90, 92, 94, 96, 98, 100.

Princess 442 is available in junior and misses sizes 10, 12, 14, 16 and 18. It takes 3 1/2 yards 3 1/2 inch fabric and 3 1/2 yards lace edge.

Using The Hands

Gaining A Practical Knowledge Of Some Useful Work

"If you will do for a living," asked the editor of the American Magazine of William B. Knudsen, president of General Motors. The answer was characteristic.

"I would try," said Mr. Knudsen. "to get work in a machine shop. If that failed, I would try for a job in a filling station, or as an apprentice to an electrician or a plumber, or as a clerk behind a counter or as an errand boy. I would try to get some work to do with my hands."

"I would probably want a college education," Mr. Knudsen went on, "but I wouldn't, if I knew what I know now, let the college education interfere with my practical education as a mechanic. I am not belittling education. What I am trying to say is that a person educated entirely through books is only half educated. There is a kind of practical knowledge and good sense which can flow into the brain only through the use of the hands."—Vancouver Province.

ACIDOSIS
The term Acidosis does not mean that the stomach is overfilled with acid. Acidosis is a different thing altogether.

Where there is a real acidosis condition this has been brought about by accidents of disease. It is incidental to such conditions as diarrhoea, excessive vomiting and starvation, to such diseases as diabetes and Bright's disease of the kidneys, to severe skin burns and absorption of poisons.

Quacks have exploited acidosis to the limit. The quick push for the "cure" of acidosis is a result of a wrong combination of foods. He wrongfully asserts that sugar, starchy foods and vegetables should never be mixed in the same meal with proteins, that is, meat, eggs, milk, etc., though Nature has created balanced such elements in foods such as cereals, vegetables and eggs. He talks of acid blood, (fermentation) and diets is incompatible with life. Blood is actually neither acid nor alkaline, rather it is neutral, or at the most slightly alkaline.

In one's choice of food, neither a weighing scale, a measuring glass nor a kitchen scale is needed. In temperate climates, experience teaches that cereals with milk and cream, meat, fish, eggs and vegetables are the best foods. Similarly, the cold of the Arctic and Antarctic regions demands a strong protein diet such as meat and fat, with carbohydrates and fruits are the foods for the Tropics. When used with discretion, these various diets will suit man's needs.

Dr. L. I. Borgia in "Nutrition and Disease," says that "the digestive distress attributed to the kind or combinations of foods eaten is due either to unfavorable emulsions or mental states, to eating when over-tired, to taking at one meal too many foods which are difficult to digest than to the sort of food." There is no association of acidosis with the water-brash or heart-burn commonly found in hyperacidity of the stomach.

Editorial Note: Readers desiring the complete set of Dr. McCullough's cancer articles at once, please send 10c to The Health League, Canada, 165 Bond St., Toronto, Ont.

A Public Benefactor
To Honor Man Who Invented Life-Saving Apparatus

A man, who though he died 80 years ago, still saves hundreds of lives every year, is to be honored by the people of Heston, Cornwall, his native town.

In 1807 Henry Tregoures, a cabinet maker, watched H.M.S. Amazon, a large 44-gun frigate, being pounded to pieces on the rocks in a gale. He saw more than a hundred souls swept to death without anyone being able to lift a hand to save them.

Tregoures determined that he would devote his life to inventing some means of rescuing sailors shipwrecked within range of shore.

His invention came some years later when he watched a fireworks display at Heston. Cornwall. The strokes of fire rushing into the darkness gave him the idea of attaching a rope to a rocket and thereby establishing communication between a wrecked vessel and the shore. Tregoures saved thousands of pounds in experiments, but died penniless.

Now Heston borough council is proposing to build a museum in his honor.

Some One Pays
Since the government has no income except what they get from the taxpayers, it stands to reason that whenever a special favor is given to one group the money must come from another group, says the Owen Sound Sun-Times. And whoever happens not to belong to any of the favored groups—well, that's his bad luck. Because the money must be collected.

Musculini, in any gathering of European statesmen, could readily speak German, French and English with equal fluency. He is said to have learned Italian from the Italian, Adolf Hitler, the super-man, never did bother to learn how to speak Italian, even.

ROYALTY RIDE ON LOCOMOTIVE

The Majesties the King and Queen are shown in the cab of Canadian Pacific locomotive 5919, in which they travelled from Sharnbrook to Winnipeg.

Her Majesty is seated beside the King, while the King, behind her, is making his way to the engine's seat at the other side of the cab. The engine 5919 was attached to the royal train directly ahead of Royal Engine 2850 on the heavy 2-2 grade. The Majesties are shown in sport clothes for the thrilling engine ride.

Miss June Both of Edmonton
 is visiting here at present with
 her aunt Mrs. Jake.

Miss Jane Moyer, nurse in
 training at University Hospital,
 Edmonton, is at present visiting
 in Redcliff with her sister, Mrs.
 H. Cooper.

Mr. Ray Stroebel is now able to
 be out of the hospital, and is recuperating
 after his recent operation
 at the home of his parents Mr.
 and Mrs. G. Stroebel.

The recent heavy rains have
 interfered with finishing the
 roadwork started some time ago
 on East Broadway, but with drier
 weather from now on this road
 should be in good shape before
 long.

A fine new cement crossing is
 being laid on Broadway at the
 corner of Third St. This is a
 much needed improvement in
 the road, as the crossing has been
 practically impassable after the
 recent heavy rains. The town
 could stand several more such
 crossings which will be laid soon
 it is hoped.

Little Lelphine Snokup, daughter
 of Mr. and Mrs. Jno. Snokup,
 Jr., met with a serious accident
 on Tuesday when her arm was
 caught in the power wringer
 while her mother was engaged in
 washing. The little girl was
 hurried to Medicine Hat for an
 X-ray examination and is now
 progressing favorably.

Have you seen the rhubarb
 plants in Mr. A. E. Oakland's
 garden? The Green Bay Tree
 has nothing on these babies.
 Fully five feet in height, with
 leaves large enough to make
 good umbrellas and sticks heavy
 enough to serve as base ball bats
 of giant walking sticks. King
 Rhubarb is certainly doing himself
 proud this year.

Interesting Local Items

Miss JUI Mackenzie left on
 Friday morning for Burdell
 where she will visit with Miss
 Martha May for a week.

Miss Inez Rindahl left on Fri-
 day for Banff where she has
 secured a position in the Banff
 Springs Hotel for the summer.

Miss Frances Buchholz, who
 is a nurse in training at Universi-
 ty Hospital, Edmonton, arrived
 here Saturday to spend three
 weeks vacation with her parents,
 Mr. and Mrs. C. Buchholz.

The farmers of this district are
 wearing the smile that won't come
 off these days. After several
 days of rain the sun has once
 more met its appearance and
 crop prospects could not seem
 better than they do right now.

Mrs. Jane Harper of Olds Alta,
 arrived in Redcliff on Saturday
 to visit with her daughter, Mrs.
 Alan Ellis and Mrs. Fred Walker.
 Mrs. Harper was accompani-
 ed from Olds by her daughter-in-
 law, Mrs. Sid Harper, who will
 visit in this district for a time.

Mr. J. R. Reid, of Punichney,
 Sask., who has been visiting here
 for the past week with his daugh-
 ter Mrs. E. L. Stone, left for
 Maple Creek on Saturday where
 he will spend another week with
 his son, Irvine M. Reid, before re-
 turning to Punichney.
